

DigPacks Translator – common usage scenarios

Scenario 1 – Batch document translation

A large organization has many documents which need to be translated to Dutch. Here's how the Translator Pro app can achieve this:

- First you will need to open the Translator Pro app and select the batch document translation option
- Here you will attach any documents you wish to translate
- You can then select the language you wish to translate the document to, in this case Dutch, and click translate
- After a short wait all the translated documents will be available for you to download, you can download each document individually or download all. In the case you select download all, in your one drive folders will be generated to organize your translated documents for future by language and date.

Scenario 2 – Single document translation

A small organization has one document which needs to be translated to Chinese Traditional. Here's how the Translator Pro app can achieve this:

- First you will need to open the app and make sure you have single document translation option selected
- Here you can attach the document you wish to translate with the options to change the name of the translated document as well as the format
- You can then select the language you wish to translate to, in this case it would be Chinese Traditional, and click translate
- After a short wait the translated document will be available to download

Scenario 3 – Audio translation

A private individual is responsible for transcribing audio files and translating them to Icelandic. Here's how they could achieve that through the Translator Pro app:

- First you will need to open the app and select the speech translation option
- Here you can attach the audio file you wish to transcribe, and then click transcribe
- After a short wait the audio file will be transcribed in a text box, here you can make and correction like punctuation
- You can then select the language you wish to translate to, this case Icelandic, and click translate
- After a short wait the translated text will appear

Scenario – SharePoint translation

An organization has a SharePoint Folder full of documents they want to translate to Japanese. Here's how they can achieve this through the Translator pro app:

- First you will need to open the app and select the SharePoint translation option
- Here you can enter your SharePoint site, the folder name you wish to translate and the language you wish to translate to (in this case Japanese)
- Click translate
- After a short wait all the translated documents will be available for you to download, you can download each document individually or download all. In the case you select download all, in your one drive folders will be generated to organize your translated documents for future by language and date.
